INDEX TO SUBJECTS

A

Acetate: Deuterio-. *See* Deuterioacetate
Fluoro-. *See* Fluoroacetate
Oxidation, *Elliott and Kalnitsky*, 477
Tetrahymena geleii utilization, *Seaman*, 97
Acetate-1-C^{14}: Oxidation *in vitro*, *Pardee, Heidelberger, and Potter*, 625
Acetoacetate: Acetone carbon, incorporation, *Plaut and Lardy*, 705
Carbonate carbon, incorporation, *Plaut and Lardy*, 705
Formate carbon, incorporation, *Plaut and Lardy*, 705
Acetone: Butanol-, fermentation mechanism, *Rosenfeld and Simon*, 395, 405
—, — —, phosphoenolpyruvate relation, *Rosenfeld and Simon*, 405
—, — —, pyruvate relation, *Rosenfeld and Simon*, 395
Carbon, acetoacetate, incorporation, *Plaut and Lardy*, 705
Acetylcholinesterase: *Wilson and Bergmann*, 683
Bergmann, Wilson, and Nachmansohn, 693
Wilson, Bergmann, and Nachmansohn, 781
Active groups, dissociation constants, *Wilson and Bergmann*, 683
Acylation mechanism, *Wilson, Bergmann, and Nachmansohn*, 781
Amino acids and related compounds, effect, *Bergmann, Wilson, and Nachmansohn*, 693
Acetyldehydroamino acid(s): Growth, effect, *Wood, Cooley, and Kelley*, 641
Adrenalin: *See also* Epinephrine
Alanine: β-, metabolism, *Graff and Hoberman*, 369
DL-, DL-methionine with, sulfur balance, effect, *Roth, Allison, and Milch*, 113
Phenyl-. *See* Phenylalanine
Albumin: Blood serum production, liver, *in vitro*, *Peters and Anfinsen*, 805
Alloisoleucine: Utilization by *Lactobacillus arabinosus*, *Hood and Lyman*, 195
Alloxan: Diabetes, liver lipogenesis and glucose oxidation, *Chernick, Chaikoff, Masoro, and Isaeff*, 527
Amino acid(s): α-, ninhydrin reaction, mechanism, *MacFadyen*, 1
MacFadyen and Fowler, 13
Acetylcholinesterase, effect, *Bergmann, Wilson, and Nachmansohn*, 693
Acetyldehydro-. *See* Acetyldehydroamino acids
D-, oxidase, desoxycorticosterone effect, *Hayano, Dorfman, and Yamada*, 603
Egg proteins, *Lewis, Snell, Hirschmann, and Fraenkel-Conrat*, 23
Labeled, incorporation into bone marrow proteins *in vitro*, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 297
—, — — diaphragm proteins *in vitro*, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 309
Lactobacillus leichmannii requirements, *Schweigert, Guthneck, and Scheid*, 229
Metabolism, methionine deficiency, effect, *Denton, Williams, and Elvehjem*, 377
—, pyridoxine deficiency, effect, *Beaton, Ballantyne, Lau, Steckley, and McHenry*, 93
Aminoguanidine: Liver, formaldehyde oxidation, effect, *Bernheim*, 225
Ammonia: Retention, fasting and glucose ingestion, effect, *Hoberman and Graff*, 373
Ammonium nitrogen: Growth, effect, *Lardy and Feldott*, 85
Amylase: α-, malt, kinetics, *Schwimmer*, 181
Anhydroaldopentobenzimidazole: Synthesis, *Huebner and Link*, 387

XUM

Anion(s): Carboxypeptidase, effect, *Neurath and De Maria*, 653
Antabuse: Liver xanthine oxidase, effect, *Richert, Vanderlinde, and Westerfeld*, 261
Anthranilic acid: 3-Hydroxy-. *See* Hydroxyanthranilic acid
Ascorbic acid: Dehydro-. *See* Dehydroascorbic acid
L-, synthesis *in vitro*, *Jackel, Mosbach, Burns, and King*, 569
Tissue collagen, effect, *Elster*, 105

B

Bacillus: *See also Lactobacillus*
Bacillus circulans: Polypeptin, purification, crystallization, and properties, *Howell*, 863
Bacteria: *See also Pseudomonas*
Benzimidazole: Anhydroaldopento-. *See* Anhydroaldopentobenzimidazole
Blood: Glutathione and hydrolysis products, determination, *Binkley, Fujii, and Kimmel*, 159
Urea, determination, colorimetric, *Halvorson and Schultze*, 471
Blood serum: Albumin, production, liver, *in vitro*, *Peters and Anfinsen*, 805
Blood sugar: Arteriovenous differences, *Somogyi*, 513
Bone marrow: Proteins, labeled amino acids, incorporation *in vitro*, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 297
Bornyl D-glucuronide: Bornyl ester, *Huebner and Link*, 393
Brain: Phosphatase, *Binkley and Olson*, 725
Butanol: -Acetone fermentation mechanism, *Rosenfeld and Simon*, 395, 405
— — —, phosphoenolpyruvate relation, *Rosenfeld and Simon*, 405
— — —, pyruvate relation, *Rosenfeld and Simon*, 395

C

Carbohydrate(s): Characterization, *Huebner and Link*, 387
Carbon: Mass 14, nucleic acid components, biosynthesis, use in study, *Heinrich and Wilson*, 447
— —, purines and pyrimidines, biosynthesis, use in study, *Heinrich and Wilson*, 447
Carbonate: Carbon, acetoacetate, incorporation, *Plaut and Lardy*, 705
Carboxypeptidase: Anions, effect, *Neurath and De Maria*, 653
Cholesterol: Esterase, *Swell, Byron, and Treadwell*, 543
—, intestine mucosa, *Swell, Byron, and Treadwell*, 543
Radioactive, biosynthesis, *Brady and Gurin*, 461
Choline: -Free diet, vitamin B_{12} and growth, effect, *Stekol and Weiss*, 343
Coenzyme: A, isolation, *Lipmann, Kaplan, Novelli, Tuttle, and Guirard*, 235
Collagen: Tissue, ascorbic acid deficiency, effect, *Elster*, 105
—, determination, *Neuman and Logan*, 549
Corticosterone: Desoxy-. *See* Desoxycorticosterone
Cyclohexane: Hexachloro-. *See* Hexachlorocyclohexane
Cysteinylglycine: Enzyme hydrolysis, *Olson and Binkley*, 731
Cytochemistry: Tissue, *Hogeboom and Schneider*, 417
Cytochrome: *c*, radioactive, injection, effect, *Beinert, Matthews, and Richey*, 167
— reductase, triphosphopyridine nucleotide-, liver, *Hogeboom and Schneider*, 417
—, tissue cells, incorporation, *Beinert, Matthews, and Richey*, 167

D

Dehydroascorbic acid: Diabetes, sulfhydryl effect, *Patterson and Lazarow*, 141
Dehydrogenase: Isocitric. *See* Isocitric dehydrogenase
Succinic. *See* Succinic dehydrogenase

Desoxycorticosterone: D-Amino acid oxidase, effect, *Hayano, Dorfman, and Yamada*, 603
Desoxypentose: Nucleic acids, *Zamenhof and Chargaff*, 207
Deuterioacetate: Ergosterol synthesis by *Neurospora*, use in study, *Ottke, Simmonds, and Tatum*, 581
Diabetes: Alloxan, liver lipogenesis and glucose oxidation, *Chernick, Chaikoff, Masoro, and Isaeff*, 527
Dehydroascorbic acid, sulfhydryl effect, *Patterson and Lazarow*, 141
Diaphragm: Proteins, labeled amino acids, incorporation *in vitro*, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 309

E

Egg(s): Proteins, amino acids, *Lewis, Snell, Hirschmann, and Fraenkel-Conrat*, 23
Elastin: Tissue, determination, *Neuman and Logan*, 549
Enzyme: Co-. *See* Coenzyme
Cysteinylglycine, hydrolysis, *Olson and Binkley*, 731
Formic acid oxidation, *Mathews and Vennesland*, 667
Liver, dietary protein, relation, *Miller*, 253
Plant, glycolic acid-oxidizing, light effect, *Tolbert and Burris*, 791
Thioethers, cleavage, *Binkley*, 287
See also Amylase, Carboxypeptidase, etc.
Epinephrine: Glucose assimilation, effect, *Somogyi*, 513
Ergosterol: Synthesis by *Neurospora*, deuterioacetate in study, *Ottke, Simmonds, and Tatum*, 581
Esterase: Acetylcholin-. *See* Acetylcholinesterase
Cholesterol, *Swell, Byron, and Treadwell*, 543
—, intestine mucosa, *Swell, Byron, and Treadwell*, 543
Estrogen(s): Natural, determination, fluorometric, *Garst, Nyc, Maron, and Friedgood*, 119
Ether: Thio-. *See* Thioether

F

Fasting: Ammonia retention, effect, *Hoberman and Graff*, 373
Fatty acid(s): Radioactive, biosynthesis, *Brady and Gurin*, 461
Fluoroacetate: Inhibition, mechanism, *Elliott and Kalnitsky*, 487
Folic acid: -Deficient liver, glycine metabolism, *Totter, Kelley, Day, and Edwards*, 145
Formaldehyde: Formation, methyl group, biooxidation, *Mackenzie*, 351
Oxidation, liver, aminoguanidine effect, *Bernheim*, 225
Formate: Carbon, acetoacetate, incorporation, *Plaut and Lardy*, 705
Formation from liver methyl compounds, *Siekevitz and Greenberg*, 275
—, methyl group, biooxidation, *Mackenzie*, 351
Formic acid: Oxidation, enzymatic, *Mathews and Vennesland*, 667

G

Gluconate: Oxidation by *Pseudomonas fluorescens, Koepsell*, 743
Glucose: Ammonia retention, ingestion effect, *Hoberman and Graff*, 373
Assimilation, epinephrine effect, *Somogyi*, 513
Oxidation, liver, alloxan diabetes, *Chernick, Chaikoff, Masoro, and Isaeff*, 527
Utilization, lipogenesis, liver, insulin effect, *Chernick and Chaikoff*, 535
Glucuronide: D-, bornyl. *See* Bornyl D-glucuronide
Glutamic acid: Lactam, formation, kinetics, *Cleaves*, 163
Glutathione: Blood, determination, *Binkley, Fujii, and Kimmel*, 159
Hydrolysis products, blood, determination, *Binkley, Fujii, and Kimmel*, 159
Metabolism, *Binkley, Fujii, and Kimmel*, 159
Olson and Binkley, 731
Glycine: Cysteinyl-. *See* Cysteinylglycine

XUM

Glycine—*continued:*
Metabolism, folic acid deficient liver, *Totter, Kelley, Day, and Edwards*, 145
DL-Methionine with, sulfur balance, effect, *Rath, Allison, and Milch*, 113
Glycolic acid: -Oxidizing enzyme, plant, light effect, *Tolbert and Burris*, 791
Growth: Acetyldehydroamino acids, effect, *Wood, Cooley, and Kelley*, 641
Ammonium nitrogen effect, *Lardy and Feldott*, 85
Methionine- and choline-free diets, effect, *Stekol and Weiss*, 343
Phenylalanine derivatives, effect, *Armstrong and Lewis*, 849
Guanidine: Amino-. *See* Aminoguanidine

H

Hexachlorocyclohexane: Inositol and, *Neurospora*, relation, *Fuller, Barratt, and Tatum*, 823
Hexokinase: Yeast and tissue, comparison, *Slein, Cori, and Cori*, 763
Hormone(s): Liver ketone bodies, effect, *Bondy and Wilhelmi*, 245
Hyaluronic acid: Umbilical cord, isolation and purification, *Jeanloz and Forchielli*, 495
Hyaluronidase: Determination, reductimetric and turbidimetric, *Rapport, Meyer, and Linker*, 615
Testes, ethanolic fractionation, *Freeman, Anderson, Webster, and Dorfman*, 201
Hydrindantin: Reactions, spectrophotometry, *MacFadyen and Fowler*, 13
Hydroxyanthranilic acid: 3-, conversion to quinolinic acid, *Bokman and Schweigert*, 153
—, metabolism, *Bokman and Schweigert*, 153
Hydroxylysine: Synthesis, *Weisiger*, 591
Hydroxytryptophan: α-, tryptophan and kynurenine relation, *Sakan and Hayaishi*, 177

I

Inositol: Hexachlorocyclohexane and, *Neurospora*, relation, *Fuller, Barratt, and Tatum*, 823
Insulin: Glucose utilization, lipogenesis, liver, effect, *Chernick and Chaikoff*, 535
Methyl ester, *Mommaerts and Neurath*, 815
— —, esterification, *Mommaerts and Neurath*, 815
Intestine: Mucosa, cholesterol esterase, *Swell, Byron, and Treadwell*, 543
Iodine: Radioactive, proteolysis determination, use in study, *Shulman and Tagnon*, 69
Isocitric dehydrogenase: Liver, *Hogeboom and Schneider*, 417
Isomerase: Phosphomannose, *Slein*, 753

K

Ketone bodies: Liver, hormones, effect, *Bondy and Wilhelmi*, 245
Kynurenine: α-Hydroxytryptophan relation, *Sakan and Hayaishi*, 177

L

Lactobacillus: Pyrimidine determination, use, *Merrifield and Dunn*, 331
Lactobacillus arabinosus: Alloisoleucine utilization, *Hood and Lyman*, 195
Lactobacillus bulgaricus: Nutrition, orotic acid, *Wieland, Avener, Boggiano, Bohonos, Hutchings, and Williams*, 737
Lactobacillus lactis: Tomato juice factor, nature, *Hendlin, Caswell, Peters, and Wood*, 647
Lactobacillus leichmannii: Amino acid requirements, *Schweigert, Guthneck, and Scheid*, 229
Leucine: Alloiso-. *See* Alloisoleucine
Lipogenesis: Glucose utilization, liver, insulin effect, *Chernick and Chaikoff*, 535
Liver, alloxan diabetes, *Chernick, Chaikoff, Masoro, and Isaeff*, 527
Lipotropic requirement: Dose-response

curves in determination, *Best, Lucas, Ridout, and Patterson,* 317
Liver: Blood serum albumin, production *in vitro, Peters and Anfinsen,* 805
Enzymes, dietary protein, relation, *Miller,* 253
Folic acid-deficient, glycine metabolism, *Totter, Kelley, Day, and Edwards,* 145
Formaldehyde oxidation, aminoguanidine effect, *Bernheim,* 225
Glucose utilization, lipogenesis, insulin effect, *Chernick and Chaikoff,* 535
Isocitric dehydrogenase, *Hogeboom and Schneider,* 417
Ketone bodies, hormones, effect, *Bondy and Wilhelmi,* 245
Lipogenesis and glucose oxidation, alloxan diabetes, *Chernick, Chaikoff, Masoro, and Isaeff,* 527
Methyl compounds, formate formation, *Sickevitz and Greenberg,* 275
17-Methyltestosterone metabolism, *Levedahl and Samuels,* 857
Testosterone metabolism, *Levedahl and Samuels,* 857
Triphosphopyridine nucleotide-cytochrome *c* reductase, *Hogeboom and Schneider,* 417
Urea formation, *Hirs and Rittenberg,* 429
Xanthine oxidase, antabuse effect, *Richert, Vanderlinde, and Westerfeld,* 261
Lysine: Hydroxy-. *See* Hydroxylysine

M

Malt: α-Amylase, kinetics, *Schwimmer,* 181
Mannose: Phospho-. *See* Phosphomannose
Methionine: Amino acid metabolism, effect, *Denton, Williams, and Elvehjem,* 377
DL-, glycine or DL-alanine with, sulfur balance, effect, *Roth, Allison, and Milch,* 113
-Free diet, vitamin B_{12} and growth, effect, *Stekol and Weiss,* 343
Methylnicotinamide: N^1-, monomethyl-L-tryptophan conversion to, *in vivo, Sung and Tung,* 637
Methyltestosterone: 17-, liver, metabolism, *Levedahl and Samuels,* 857
Mold: *See also Neurospora*
Monomethyl-L-tryptophan: Niacin and N^1-methylnicotinamide conversion from, *in vivo, Sung and Tung,* 637

N

Neurospora: Ergosterol synthesis, deuterioacetate in study, *Ottke, Simmonds, and Tatum,* 581
Hexachlorocyclohexane and inositol, relation, *Fuller, Barratt, and Tatum,* 823
Niacin: Monomethyl-L-tryptophan conversion to, *in vivo, Sung and Tung,* 637
Nicotinamide: N^1-Methyl-. *See* Methylnicotinamide
Ninhydrin: α-Amino acids, reaction mechanism, *MacFadyen,* 1
MacFadyen and Fowler, 13
Nitrogen: Ammonium. *See* Ammonium nitrogen
Nucleic acid: Components, biosynthesis, C^{14} in study, *Heinrich and Wilson,* 447
Desoxypentose, *Zamenhof and Chargaff,* 207
Pentose, yeast and tissue, nucleotides, *Chargaff, Magasanik, Vischer, Green, Doniger, and Elson,* 51
Nucleotide: Ribo-. *See* Ribonucleotide
Triphosphopyridine, chemical constitution, *Kornberg and Pricer,* 557
—, -cytochrome *c* reductase, liver, *Hogeboom and Schneider,* 417
Yeast and tissue, pentose nucleic acids, *Chargaff, Magasanik, Vischer, Green, Doniger, and Elson,* 51

O

Organic acid(s): Tobacco leaves, metabolism, *Vickery and Abrahams,* 411
Orotic acid: *Lactobacillus bulgaricus* nutrition, *Wieland, Avener, Bog-*

giano, Bohonos, Hutchings, and Williams, 737
Oxalate: Tobacco leaf culture, effect, *Vickery and Abrahams,* 411
Oxidase: D-Amino acid, desoxycorticosterone effect, *Hayano, Dorfman, and Yamada,* 603
Xanthine, liver, antabuse effect, *Richert, Vanderlinde, and Westerfeld,* 261
Oxytocic material: Pituitary, posterior, *Pierce and du Vigneaud,* 77

P

Pentose: Desoxy-. *See* Desoxypentose
Nucleic acids, tissue, nucleotides, *Chargaff, Magasanik, Vischer, Green, Doniger, and Elson,* 51
— —, yeast, nucleotides, *Chargaff, Magasanik, Vischer, Green, Doniger, and Elson,* 51
Peptidase: Carboxy-. *See* Carboxypeptidase
Peptin: Poly-. *See* Polypeptin
Phenylalanine: Derivatives, growth, effect, *Armstrong and Lewis,* 849
Racemic, resolution, *Wretlind,* 221
Phosphatase: Brain, *Binkley and Olson,* 725
Phosphoenolpyruvate: Butanol-acetone fermentation mechanism, relation, *Rosenfeld and Simon,* 405
Phosphomannose: Isomerase, *Slein,* 753
Pituitary: Posterior, oxytocic material, *Pierce and du Vigneaud,* 77
Plant: Enzyme, glycolic acid-oxidizing, light effect, *Tolbert and Burris,* 791
Polypeptin: *Bacillus circulans, Howell,* 863
— —, purification and properties, *Howell,* 863
Protein(s): Bone marrow, labeled amino acids, incorporation *in vitro, Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 297
Diaphragm, labeled amino acids, incorporation *in vitro, Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 309
Protein(s)—*continued:*
Dietary, liver enzymes, relation, *Miller,* 253
Egg, amino acids, *Lewis, Snell, Hirschmann, and Fraenkel-Conrat,* 23
Proteolysis: Determination, radioactive iodine in study, *Shulman and Tagnon,* 69
Protozoa: *See also Tetrahymena*
Pseudomonas fluorescens: Gluconate oxidation, *Koepsell,* 743
Purine(s): Biosynthesis, C^{14} in study, *Heinrich and Wilson,* 447
Pyridoxine: Amino acid metabolism, effect, *Beaton, Ballantyne, Lau, Steckley, and McHenry,* 93
Pyrimidine(s): Biosynthesis, C^{14} in study, *Heinrich and Wilson,* 447
Determination, lactobacillus use, *Merrifield and Dunn,* 331
Pyruvate: Butanol-acetone fermentation mechanism, relation, *Rosenfeld and Simon,* 395
Phosphoenol-. *See* Phosphoenolpyruvate

Q

Quinolinic acid: 3-Hydroxyanthranilic acid conversion, *Bokman and Schweigert,* 153

R

Reductase: Cytochrome *c*, triphosphopyridine nucleotide-, liver, *Hogeboom and Schneider,* 417
Ribonucleotide(s): Separation and determination, micro-, *Magasanik, Vischer, Doniger, Elson, and Chargaff,* 37
Ricin: Denaturation, temperature and pH, effect, *Levy and Benaglia,* 829

S

Succinic dehydrogenase: Determination, spectrophotometric, micro-, *Cooperstein, Lazarow, and Kurfess,* 129
Sugar: Blood. *See* Blood sugar
Sulfhydryl: Dehydroascorbic acid diabetes, effect, *Patterson and Lazarow,* 141
Sulfur: Balance, DL-methionine with

glycine or DL-alanine, effect, *Roth, Allison, and Milch,* 113

T

Testes: Hyaluronidase, ethanolic fractionation, *Freeman, Anderson, Webster, and Dorfman,* 201

Testosterone: Liver, metabolism, *Levedahl and Samuels,* 857

17-Methyl-. *See* Methyltestosterone

Tetrahymena geleii: Acetate utilization, *Seaman,* 97

Thioether(s): Enzymatic cleavage, *Binkley,* 287

Thiourea: Metabolism, *Schulman,* 717

Thyroid, metabolism, *Schulman,* 717

Thyroid: Thiourea metabolism, *Schulman,* 717

Tissue: Cytochemistry, *Hogeboom and Schneider,* 417

Tobacco: Leaves, organic acids, metabolism, *Vickery and Abrahams,* 411

—, oxalate solutions, culture effect, *Vickery and Abrahams,* 411

Tomato juice: Growth factor, nature, *Hendlin, Caswell, Peters, and Wood,* 647

Triphosphopyridine: Nucleotide, chemical constitution, *Kornberg and Pricer,* 557

Nucleotide-cytochrome *c* reductase, liver, *Hogeboom and Schneider,* 417

Tryptophan: α-Hydroxy-. *See* Hydroxytryptophan

α-Hydroxytryptophan relation, *Sakan and Hayaishi,* 177

Monomethyl-L-. *See* Monomethyl-L-tryptophan

U

Umbilical cord: Hyaluronic acid, preparation, *Jeanloz and Forchielli,* 495

Urea: Blood, determination, colorimetric, *Halvorson and Schultze,* 471

Formation, liver, *Hirs and Rittenberg,* 429

Thio-. *See* Thiourea

V

Vitamin(s): B_{12}, methionine- and choline-free diets, effect, *Stekol and Weiss,* 343

X

Xanthine: Oxidase, liver, antabuse effect, *Richert, Vanderlinde, and Westerfeld,* 261

Y

Yeast: Hexokinase, *Slein, Cori, and Cori,* 763

Pentose nucleic acid, nucleotides, *Chargaff, Magasanik, Vischer, Green, Doniger, and Elson,* 51
